# Functions of the Astrocytes

Questions:

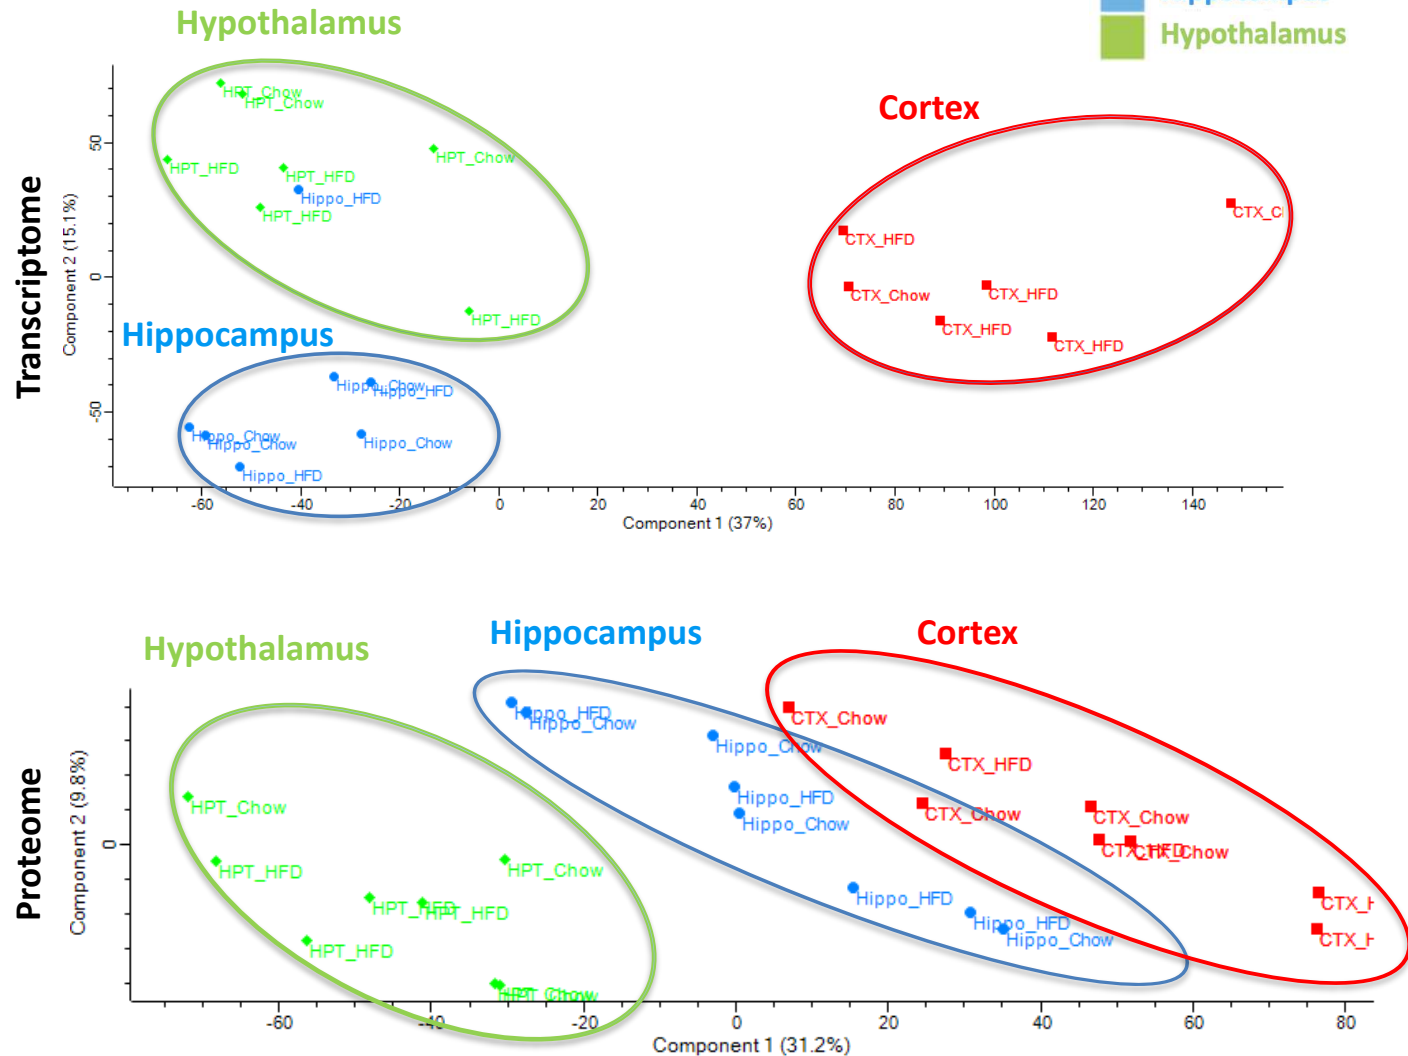

Are astrocytes a heterogeneous cellular population?

How astrocytes from different location in the brain respond to the hypercaloric diet?

# Heterogeneity in the Brain Areas

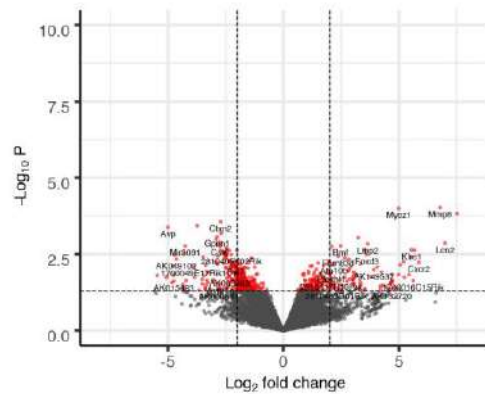

- Astrocytes are isolated using ACSA-2 antibody and MACS sorting
- Astrocytes are measured at transcriptome and proteome levels

location

## Quantitative Effect of a Diet

## Proteome

# Integration of Transcriptomics and Proteomics Data

# Correlation vs. Partial Correlation

True relationship

Correlation Matrix

	A	B	C
A	1.000	0.848	0.836
B	0.848	1.000	0.705
C	0.836	0.705	1.000

Partial Correlation Matrix

	A	B	C
A	1.000	0.848	0.836
B	0.848	1.000	0.000
C	0.836	0.000	1.000

## Higher Entropy in HFHS Diet Data

## Zoom-in Network

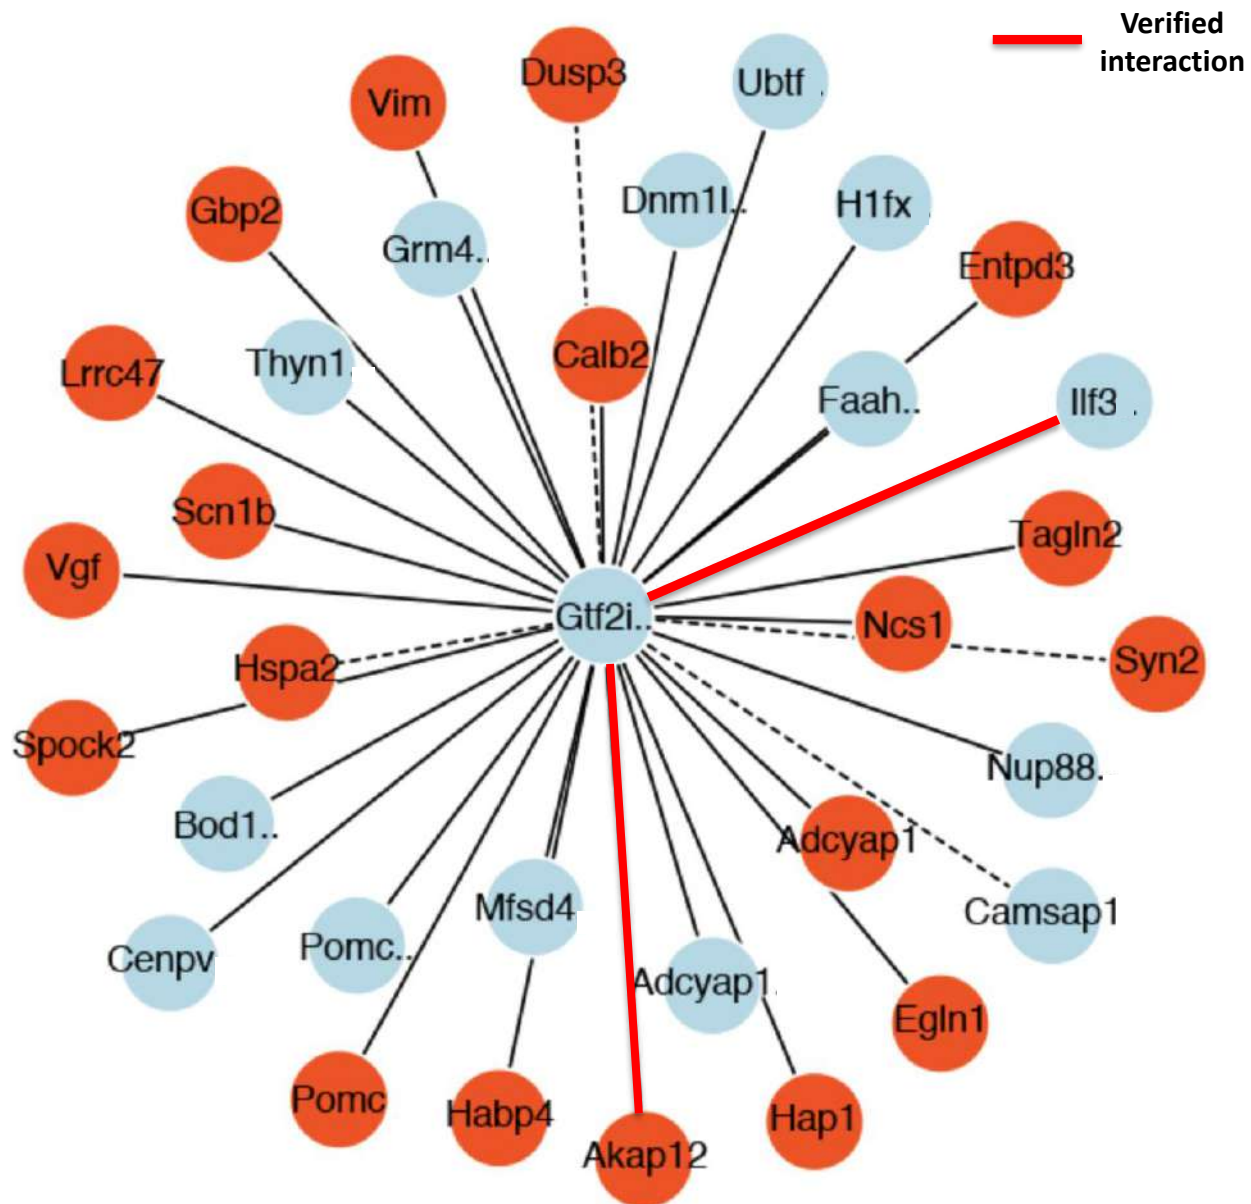

## Chow Diet Data

## HFHS Diet Data

# Regulatory Cascades

## Future directions...

- Identify the regulatory cascades, motifs and communities of interest from the networks and verify them experimentally.
- Compare network from chow and HFHS diet data.
- Include prior knowledge from other experiments to improve estimation of the interactions.
- Extend and apply this methodology on single-cell RNA-seq data and on other types of data.
